PERSONAL PROFILE

Senior Software Engineer with 7+ years of experience building secure, data-rich enterprise and fintech applications using **React**, **Next.js**, **TypeScript**, **JavaScript**, and **Python**, with backend experience across REST APIs and FastAPI. Proven track record of independently owning complex products end-to-end — from frontend architecture, design systems, and authorisation-driven workflows to API integrations, automated testing, and production delivery. At Adobe, delivered enterprise administration, large-scale design system modernisation, production automation, and AI-assisted engineering tooling for mission-critical Admin Console workflows used by global organisations.

TECHNICAL SKILLS

Frontend Development	React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, CSS Layouts, Design Tokens, Accessibility (a11y)
Architecture & Design Systems	Design Systems Architecture, Microfrontend, Monolithic, Component APIs, Visual Regression Testing
Backend & APIs	Python, FastAPI, REST APIs, Microservices
AI & Agentic Tooling	Claude Code, Cursor, Augment Code, Codex, Copilot, Model Context Protocol (MCP), Agentic Workflows
Cloud & Infrastructure	AWS, Docker, Kubernetes, CI/CD, Webpack, NPM, Git

PROFESSIONAL EXPERIENCE

Adobe — Senior Software Engineer

Bangalore, India | Jul 2023 – Present

Admin Console — Enterprise Platform

- Architected and delivered Contract Admin, introducing a new authorisation layer between System and Product Admins and enabling same-type multi-contract support in Adobe Admin Console, supporting a 20K+ global enterprise customer base.
- Delivered EU Digital Services Act compliance for Adobe's EU customer segment in 17 days, consolidating 3 APIs into 1 through API-level enhancements and delivering authorisation-sensitive UI workflows with zero QA/E2E defects.

Admin Console — Spectrum 2 Modernisation

- Architected and executed Spectrum 2 design system migration across 6 major enterprise tabs and ~3,500 files, establishing tokenised CSS layouts, accessible component APIs (a11y), and standardised UI patterns.
- Optimised front-end architecture during migration, reducing main bundle size by ~20% and improving Core Web Vitals (FCP/LCP) by ~25% across key customer workflows.
- Built Claude-powered migration and PR-review skills to automate phased design system token updates, visual regression checks, and accessibility compliance across complex code surfaces.

ADS Data Platform

- Built a Python-based Databricks pipeline orchestrator coordinating 8 dependent data jobs in an ~8-hour workflow, automating dependency tracking, polling, and failure/retry handling to eliminate manual intervention.
- Contributed across three production Databricks data workflows: built the Enterprise Trial pipeline, implemented RA Introductions → SCD Type-2 processing for ~100 new leads/day, and developed a Flywheel validation framework to detect unintended values before data reached final tables.

Zeta Suite — Software Developer

Bangalore, India | Jul 2021 – Nov 2022

- Built data-rich applications and reusable components for a B2B fintech platform, delivering API-driven financial and operational workflows from development through production integration.
- Worked across application and infrastructure layers, including building a Kubernetes custom controller to automate internal operational workflows; delivered a production-ready product dashboard for Money20/20 within 24 hours.

- NiYO Solutions — Frontend Developer**

Bangalore, India | Dec 2018 – Jun 2021
- Enhanced and maintained a React-based customer workbench supporting customer account management and operational workflows through reusable components and API integrations.
 - Built a mobile-first recharge and bill payment application integrated into the NiYO Bharat Android app, implementing responsive user flows and connecting backend services for financial transactions.
 - Won the NiYOTthon Hackathon by designing and building a full-stack hiring platform from concept to working product.

- Pricify Web Technologies Ltd — Frontend Developer**

India | Apr 2018 – Dec 2018
- Developed reusable frontend capabilities for an e-commerce platform, building responsive product discovery and shopping experiences across web devices.

PERSONAL PROJECTS

- Lord of the Pings — AI Work-Planning Agent**

Claude Code, MCP, React, TypeScript, Electron
- Built an agentic work-planning system using Claude Code and MCP, integrating 5 enterprise tools — Slack, Jira, Confluence, GitHub, and Databricks — to aggregate, deduplicate, and prioritise work signals.
 - Designed persistent agent workflows for daily planning, end-of-day triage, and weekly reviews, with learned priority suggestions, scheduling, and human-in-the-loop guardrails for write operations.

- Personal Web Portfolio & Design Showcase**

Next.js, React, TypeScript, Tailwind CSS, Framer Motion
- Designed and engineered a high-performance personal showcase highlighting interactive UI components, custom theme tokens, and accessible micro-interactions.
 - Achieved 100/100 Lighthouse performance, accessibility, and SEO metrics via Next.js SSR/SSG rendering strategies and optimized asset pipeline delivery.

EDUCATION

- Master of Computer Applications (MCA)**

2014 – 2017

Madan Mohan Malaviya University of Technology
- Bachelor of Science in Computer Science (B.Sc.)**

2011 – 2014

DDU Gorakhpur University

CERTIFICATIONS

- **AI For Everyone** — DeepLearning.AI (November 2025)
